Summary

Results-driven Software Engineering undergraduate at the University of Westminster (IIT Colombo) specialising in full-stack and mobile application development, with strong foundations in React.js, React Native, TypeScript, Python, and REST API integration. Demonstrated ability to deliver production-ready applications across web and mobile platforms, including an AI-powered plant disease detection system, a cross-platform mobile bus booking app with real-time GPS tracking, and a cross-platform pharmacy locator with Google Maps integration. Alongside academic work, brings 4+ years of professional freelance experience delivering 100+ projects to international clients across web development, UI/UX, and digital media achieving Top Rated Seller status on Fiverr. Experienced in Agile (Scrum) workflows, version control with Git/GitHub, and cross-functional collaboration through active involvement in the IEEE Robotics & Automation Society. Seeking a Software Engineering internship to apply technical knowledge and real-world project experience in a professional development environment.

Experience

TOP RATED FREELANCE ANIMATOR | FIVERR & UPWORK

February 2020 - Present

- Manage 3 seller accounts across animation and video editing categories.
- Delivered 100+ international projects including motion graphics, branding visuals, and promotional content.
- Achieved Top Rated Seller status through high-quality output and strong client satisfaction.
- Independently manage requirement analysis, production, revisions, and delivery timelines.

FREELANCE FRONTEND DEVELOPER | UPWORK

February 2022 - Present

- Delivered 20+ end-to-end projects for international clients including portfolios, educational platforms, dashboards, agency websites, automation tools, landing pages, and e-commerce stores.
- Developed both frontend and backend solutions using React, Next.js, TypeScript, Node.js, and modern tools including Shopify, Odoo, EasyOrders, and Hostinger.
- Built professional portfolios for media creators, AI-powered training websites, and online stores for fashion brands, each delivering measurable client outcomes.
- Built strong long-term client relationships through clear communication, reliable delivery, and post-launch support.

SOCIAL DESIGNING VICE CHAIR | IEEE ROBOTICS & AUTOMATION SOCIETY

May 2024

- Led social media and branding strategy for a major IEEE robotics event named ROBOTNEXUS 2.
- Designed promotional materials and coordinated digital engagement campaigns.
- Worked with cross-functional teams to ensure professional event visibility and outreach.

MEMBER | IEEE

March 2024 - Present

- Active member engaged in technical communities, professional networking, and engineering-focused initiatives.

SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, Redux Toolkit, Zustand, React Query, GSAP, Framer Motion, Shadcn/UI, Bootstrap, Sass/SCSS

Mobile: React Native, Flutter, Dart, Expo, Expo Router, AsyncStorage, React Native Maps, Expo Location, Expo Image Picker

Backend & Database: Node.js, Express.js, Python, FastAPI, Strapi, Prisma, MongoDB, PostgreSQL, Ap-pwrite

AI/ML: TensorFlow, Keras, MobileNetV2, Scikit-learn, Pandas, NumPy

API & Integrations: REST API, Axios, Postman, Payment Integration, Google Auth, NextAuth, Google Maps API

Tools & Testing: Git, GitHub, Figma, Jest, React Testing Library

Project Management: Agile (Scrum), Jira, Trello, Notion

UNIVERSITY OF WESTMINSTER | BSC (HONS) SOFTWARE ENGINEERING

Presently enrolled

- Programming, Data Structures, Database Systems, Digital Logic Design, Software Development

INFOMATICS INSTITUTE OF TECHNOLOGY (IIT)

2024

- Completed iit foundation programme

THURSTAN COLLEGE - SRI LANKA

2009-2022

- GCE Advanced Level – Mathematics Stream
- GCE Ordinary Level – 7As 1B 1C
- Grade 5 Scholarship Examination – 174 Marks

PROJECTS

MEDIFIND PHARMACY LOCATOR & ORDERING SYSTEM

Live Demo | Source Code | Source Code Web

- Technologies: Flutter, Dart, Google Maps API, Flutter Animations
- Key Features: Nearby Pharmacy Locator, OCR Prescription Upload, Medicine Search, Health Profile, Medication Reminders, Multi-step Onboarding
- Overview: A cross-platform mobile health application that helps users locate nearby pharmacies and manage their personal health profile. Features an animated onboarding flow collecting health data (blood type, allergies, chronic conditions, weight, age), real-time avatar customisation, GPS-based pharmacy discovery with Google Maps integration, and a prescription OCR upload system. Built with a custom animated UI system including drum-roll pickers, floating orb animations, and a seamless dark-/light themed authentication flow.

HighwayGo LK

Live Demo | Source Code

- A full-featured highway bus booking mobile application for Sri Lanka with dual user roles which are passengers and bus owners.
- Passengers can search routes, select seats interactively, make payments and track their bus live on Google Maps. Bus owners get a dedicated portal to manage buses, view all bookings with revenue stats, and share real-time GPS location with passengers.
- Built with React Native and Expo, featuring JWT authentication, multi-role session management via AsyncStorage, an interactive seat grid with live availability, and a Google Maps live tracking screen with auto-refresh every 10 seconds.

PLANT DISEASE DETECTION

Live Demo | Source Code

- Technologies: Python, TensorFlow, Keras, MobileNetV2, Streamlit, Google Colab, Kaggle API, Pillow, NumPy, CSS
- Key Features: Transfer Learning (MobileNetV2), 26 Disease Classes, Real-Time Prediction, Custom Gradient UI, Cloud Deployment, Auto Model Download from Google Drive.
- Overview: An AI-powered web application that detects plant leaf diseases from uploaded images using a MobileNetV2 transfer learning model trained on 87,000+ images across 14 crop species. Achieved high classification accuracy across 26 disease categories with a confidence score output. Deployed on Streamlit Cloud with a fully custom-designed botanical UI, accessible via public URL with no installation required.

MOVIE RECOMMENDER ML APP

Live Demo | Source Code

- Technologies: Python, FastAPI, Scikit-learn, Pandas, React.js, JavaScript, TMDB API, Pickle
- Key Features: Content-Based Filtering, Cosine Similarity, Real-Time Search Autocomplete, Movie Poster Integration, REST API
- Overview: A full-stack machine learning web application that recommends movies based on content similarity. Engineered a recommendation engine using CountVectorizer and cosine similarity on the TMDB 5000 dataset, achieving real-time results via a FastAPI backend. Built a responsive React frontend with live search autocomplete and dynamic poster fetching from the TMDB API.
